

## What to Expect with Your TEPEZZA<sup>®</sup> Treatment

### WHAT IS INFUSION THERAPY?

- In order to treat thyroid eye disease (TED), your doctor has ordered TEPEZZA, an intravenous medication also known as infusion therapy
- Infusion therapy is the administration of a medication through a thin catheter in your vein, also called “intravenous therapy or IV therapy”

### WHAT SHOULD YOU EXPECT?

- Soleo will verify your health insurance benefits and obtain prior authorization for treatment
- Once insurance authorization is approved, Soleo will conduct a welcome call and schedule your first infusion. Additionally, a pharmacy team member will call to perform an initial assessment of your condition prior to dispensing your medication
- We offer the flexibility of receiving the infusion in the comfort of your home or in Soleo’s ambulatory infusion suite (AIS), where available
  - If you receive your infusion at home, medication and supplies will be delivered directly to your home prior to the scheduled infusion. The nurse will arrive at your home at the scheduled appointment time, administer your medication and monitor you for 90 minutes following infusion completion
  - If you receive your infusion in Soleo’s AIS, please arrive at your scheduled appointment time to the AIS where the nurse will administer your medication and monitor you for 90 minutes following infusion completion
- Your treatment regimen includes 8 total infusions spaced 3 weeks apart
  - The first 2 infusions will be administered over 90 minutes
  - If you do not experience a reaction to your first 2 infusions, the next 6 infusions will be administered over 60 minutes
- A nurse and pharmacist are on-call 24/7 if you have any questions or needs
- A care team member will call you prior to each infusion to evaluate how you are doing with your infusion therapy and ask a few assessment questions, such as whether you are experiencing symptoms, medication side effects and overall wellness

**Please see Full Prescribing Information for TEPEZZA at [TEPEZZA.com](https://www.tepezza.com)**

## WHAT DOES IT COST?

- The cost will vary, but most health insurance will cover your infusion therapy and the individual patient responsibility will depend on your benefit plan. Soleo Health will work with your doctor and your insurance provider to verify benefit and insurance coverage
- Our reimbursement specialists will inform you of your deductible and copay responsibility prior to your first infusion and can develop a payment plan that works for you, if necessary. We will bill your insurance provider directly for services provided, as appropriate
- A dedicated reimbursement specialist is available to answer any questions you may have

## THE SOLEO HEALTH DIFFERENCE

- Experienced, local team that provides excellence in patient care and customer service
- 24/7 access to specifically trained pharmacists and registered nurses
- Flexible scheduling of services based upon your availability
- Comprehensive patient/caregiver education and support
- Reimbursement specialists trained to provide assistance with insurance questions
- Patient advocacy including education on copay assistance
- Local, ambulatory infusion suite available
- Service support when traveling

## ENHANCING PATIENT EXPERIENCE

We know you have a choice in healthcare providers. Soleo Health is dedicated to enhancing our patients' experience.
